

# Seed & Propagation Capabilities 2025-2026

If what you are looking for isn't on this list, please call to discuss.

The availability of seed and subsequent plant production is governed by nature and fluctuates from year to year. If we can't supply a particular species this season, we may be able to the next.

## Recalcitrant species specialists

Specialised in the propagation of provenance specific Western Australian flora, we focus on producing difficult and recalcitrant species. Our commitment to mastering propagation techniques means we can proudly supply species such as:

- *Exocarpos sparteus*
- *Hibbertia hypericoides*
- *Lechenaultia biloba*
- *Lepidosperma gladiatum*
- *Leucopogon parviflorus*
- *Lomandra maritima*
- *Lomandra preissii*
- *Spinifex hirsutus*

## Contract seed collection and growing

Natural Area has the capacity to collect seed for and propagate over 600 native plant species. We currently grow over 1,500,000 plants per year. Our contract seed collection and provenance specific growing has expanded from the Swan Coastal Plain to satisfying project needs right across WA; including the Pilbara, Goldfields and Wheatbelt.

We are invested in growing our propagative capabilities, regularly conducting seed viability and germination trials.

Contact us to discuss how we can work with you to deliver the species specific to your current and future projects needs.

Seed collection for 2026 planting has begun & propagation for 2025 planting is underway.
