

## Environmental Consulting, Management & On-ground Services

Natural Area is a WA-owned environmental consulting and land management company with over 20 years of local experience. We offer a full range of environmental services across Western Australia, from one-time solutions to comprehensive, long-term project planning and delivery, with a focus on high-quality environmental solutions.

### OUR SERVICES

#### Vertebrate Pest Management

Data-driven integrated pest management, utilising monitoring, trapping, baiting, and biological controls for feral animal species.

#### Environmental Consulting

Flora, fauna, and environmental impact assessments, regulatory approvals, environmental management plans, offset site and revegetation plans as well as ongoing monitoring.

#### Environmental Civil Works

Civil projects within environmentally sensitive and remote areas, including site rehabilitation erosion controls and construction of natural environment access infrastructure.

#### On-Ground Services

Expertise in revegetation, rehabilitation, and on-going site maintenance for a wide range of environments and land management projects

#### Native Horticultural Services

Comprehensive native seed and plant propagation for ecological restoration and revegetation projects, including seed collection, processing, storage and direct seeding. We specialise in propagating over 600 native plant species, delivering high-quality, provenance specific stock.

We partner with clients in government, mining, resources, and development to deliver tailored services that meet both regulatory and environmental goals. Our teams provide practical, innovative solutions for sustainable outcomes.

*With over 20 years of experience in environmental consulting and management, our specialised teams deliver comprehensive, tailored and integrated solutions.*

*We are backed by WA's largest full-time environmental field crew and a state-of-the-art nursery that produces over 1.5 million native and endemic plants annually.*
