

Vertebrate Pest Management

For over 10 years Natural Area has successfully delivered an extensive range of feral animal control programs for clients across Western Australia. Specialising in, but not limited to Fox, Cat and Rabbit management, we provide a comprehensive understanding of vertebrate pest management (VPM) techniques, as well as a substantial inventory of plant and equipment to deliver high-quality outcomes to our clients.

REPORTING

All works are conducted by our experienced and qualified team of licensed pest management technicians (LPMT) in accordance with current best practices and industry standard operating procedures.

CERTIFIED
ISO 9001
ISO 14001
ISO 45001

We collaborate with clients to develop integrated pest management solutions, engaging stakeholders and ensuring that each program aligns with ecological and community expectations.

Licensed & Experienced Team - Data-Driven Approach - Animal Welfare & Safety Focused

Consultation & Stakeholder Engagement

We collaborate with clients to develop integrated pest management solutions, engaging stakeholders and ensuring that each program aligns with ecological and community expectations.

Comprehensive Monitoring Services

- GROUND SURVEYS
- TRAIL CAMERA
- THERMAL IMAGING
- AERIAL SURVEILLANCE (COMMERCIAL DRONE LICENSED)

Trapping Programs

- CAGE TRAPS
- SOFT-JAW TRAPS
- GIS LOCATED TRAP LOCATIONS
- LIVE CAPTURE PHOTOS

Targeted Baiting Programs

Strategic and tailored baiting programs designed to provide long term effectiveness, whilst minimising off-target impacts.

- 1080
- PINDONE
- SODIUM NITRITE

Biological Control

RHDV1-K5 virus release is an effective tool for rabbit management. Viral release is used in conjunction with other control methods to reduce the potential for immunity to develop.

Ground Shooting

Discrete and professional implementation of controlled ground shooting programs under Natural Area's firearms license. Programs prioritise risk management and involve WA police liaison in compliance with state firearm laws.

Field Necropsy

Data informs population dynamics & management strategies.

Typically includes:

- SEX & WEIGHT RECORDS
- REPRODUCTIVE STATUS
- STOMACH CONTENTS ANALYSIS

GIS & Mapping

Mappings, management and analysis of geospatial data. All shape files are provided to the client. Mapping may include:

- SURVEY DATA
- TRAP & BAIT LOCATIONS

Reporting

Detailed project reporting, typically covering:

- POST ACTIVITY REPORTS
- TECHNICAL SURVEY REPORTS
- MANAGEMENT PLANS
